Uncertainty and validation

The sample uses a five-minute birth-time uncertainty window. Boundary sampling must be consulted before relying on fine Vargas. The ELP/MPP02 Moon is DE441-gated; Lahiri is versioned and anchor-tested. Planet and Lagna professional certification remains pending.

Privacy-safe variant

The application can generate a privacy-safe copy that removes the person's name and birthplace while retaining calculation evidence, methodology, uncertainty, engine version, and the selected charts.

Important limitation

This report is a research artifact. Do not use it as a substitute for professional medical, legal, financial, or mental-health advice.
